## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 04 December 2007 has been entered.

### ***Allowable Subject Matter***

The indicated allowability of claims 16-21 is withdrawn in view of the newly discovered reference(s) to Navas (5,480,401). Rejections based on the newly cited reference(s) follow.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 16-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Navas (5,480,401).

Navas discloses the claimed invention including a fixation device 1 comprising a support member 1a, 3 having a slot (e.g. defined by 4b, 3c, etc.) extending through the side thereof, first and second support shafts 5 extending through the slot of the support member, and a coupling assembly positioned along the support member (see, e.g. Figs 1-4 and col. 1, lines 24-29 and 40-67). The slot and the support shafts are configured and dimensioned to allow movement of the support shafts in a longitudinal direction with respect to the support member. The coupling device is sufficiently "configured and arranged" to be capable of satisfying the intended uses set forth in claim 16. A variable force is applied against the support shafts by resilient members 7. Since members 7 are resilient and have an inherent spring rate, they can be considered springs. The device includes at least one threaded, selectively positionable coupler, e.g. 50, 51 (in the embodiment of Fig. 4).
